HEALTH & ENVIRONMENT

Cellofoam RAIL products are physiologically absolutely safe and fully REACH compliant (as of June 2022).

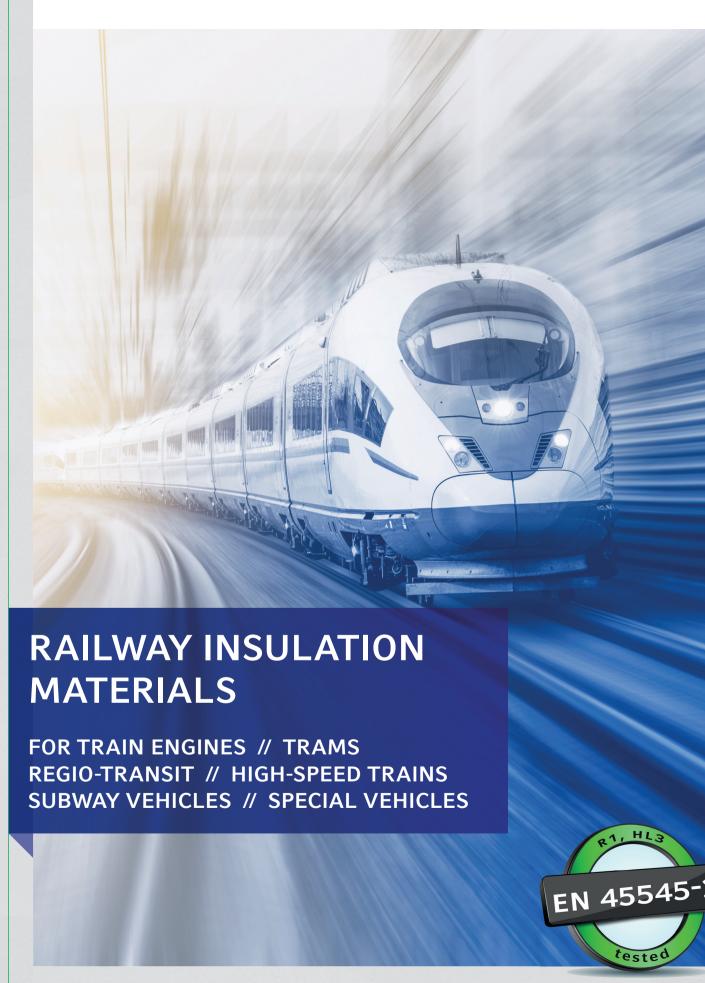

The excellent hydrolysis stability and UV resistance of our non-woven materials minimize aging effects and extend the products' lifetime to at least 30 years.

Our products Cello® F700 FR HO, Cello® F800 FR, Cello® F800 FR HO are based on non-wovens made from **up to 69 % recycled fibers**, mainly former PET bottles, and are fully recyclable.

WE MAKE THE WORLD A QUIETER PLACE

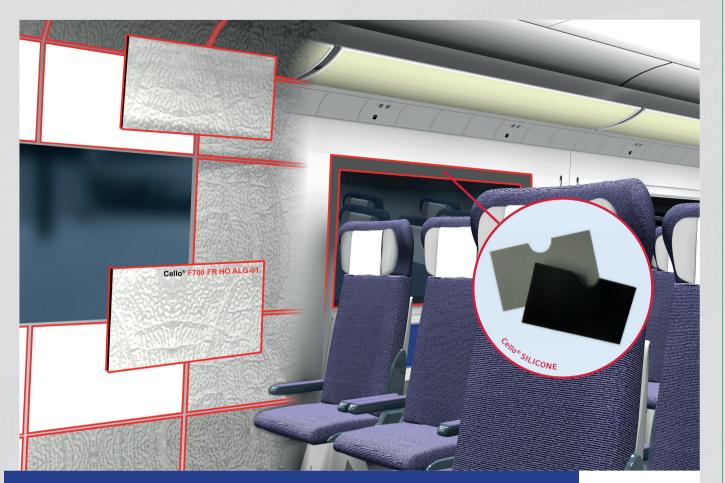

Cellofoam is a leading specialist in the area of sound Our very durable Cello® insulation products designed insulation and sound attenuation products for industrial specially for use in rail vehicles are the result of and technical applications.

Besides major bus, rolling stock and construction techniques. They comply with all European fire safety machinery manufacturers, a wide range of about standards and provide not only excellent acoustic 1,600 industrial customers in over 70 countries across performance, but also highly effective insulation against the world benefit from our advanced products and heat and cold. extensive acoustic know-how.

systematic in-company research on advanced materials, added-value material combinations and processing

Ask for our RAIL information brochure, featuring sample materials and technical data sheets, by writing to sales@cellofoam.de

SIDE WALL & CEILING

In rail vehicles, the **side walls and the roof** need effective insulation.

Cello® F700 FR HO ALG-01, a PES non-woven with aluminum surface layer, combines outstanding sound absorption values with excellent fire performance. The corrosion-proof and anti-bacterial aluminum surface has been optimized for acoustic effectiveness.

CELLO® SILICONE

- Excellent sealing effect
- High temperature resistance
- EN 45545-2 requirement R22, HL3 &
- R10, HL3 fulfilled
- High ozone and weather resistance
- Good resistance against chemicals

Suitable for window sealing

Excellent acoustic and thermal insulation

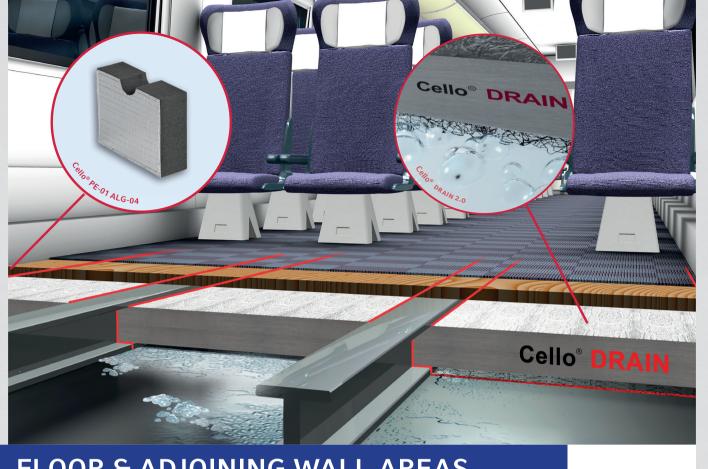

• EN 45545-2 requirement R1, HL3 fulfilled

effective sound insulation

FLOOR & ADJOINING WALL AREAS

optimum thermal insulation.

The solution of choice here is our Cello® DRAIN 2.0

The key requirements for materials installed in rail fiber matrix layer that allows condensation water to vehicle floors include efficient sound insulation and drain off easily in all directions. The aluminum foil surface blocks the penetration of liquids into the non-woven, preventing fungal and mold growth.

combination product. This fire-, vibration- and crush- The perfect material for transition areas from floor resistant PES non-woven offers excellent sound to wall is our closed-cell PE foam with protective absorption values and is enhanced with a flexible aluminum surface layer: Cello® PE-01 ALG-04.

CELLO® DRAIN 2.0

CELLO® PE-01 ALG-04

- Reflection of heat radiation
- EN 45545-2 requirement R1, HL3 fulfilled
- Closed-cell
- Low moisture absorption Low weight
- Effortless to cut with a cardboard cutter
- The aluminum foil prevents the penetration of dust and liquids into the foam

Excellent acoustic and thermal insulation

- EN 45545-2 requirement R1, HL3 fulfilled
- Diffusion-proof aluminum foil as barrier against vapors and liquids
- · Robust, non-crush material that withstands mechanical stress, contact side smoothed
- Ageing and abrasion-resistant matrix layer for drainage
- High shape stability in humid conditions, at extreme temperatures and in case of vibrations

have made it one of our core competencies to provide means of preventing microbial growth in air ducts, excellent insulation materials for high-performance while the non-woven minimizes the noise generated AC and ventilation systems and air ducts.

The use of our aluminum-coated PES non-woven An alternative solution for this application is our supply of fresh and healthy air.

Air conditioning and ventilation: We at Cellofoam Its anti-bacterial aluminum surface is an effective by moving air.

Cello® F700 FR HO ALG-01 helps ensure a reliable hydrophobic melamine foam with protective aluminum surface layer: Cello® HR 290 HO ALG-04.

CELLO® F700 FR HO ALG-01

- EN 45545-2 requirement R1, HL3 fulfilled Optimized weight-volume ratio for particularly
- Diffusion-proof aluminum foil as barrier against vapors and liquids
- Oil- and water-repellent surface layer Vibration resistant

effective sound insulation

 Production of customer-specific 2D/3D parts on the basis of CAD data

Excellent thermal insulation

CELLO® HR 290 HO ALG-04

- EN 45545-2 requirement R1, HL3 fulfilled
- Oil- and water-repellent finish
- Oil- and water-repellent surface layer
- High temperature resistance
- Scrim-reinforced aluminum foil for extra robustness and tear strength
- Low thermal conductivity
- Production of customer-specific 2D/3D parts on the basis of CAD data

PARTITION WALLS & FLOOR

Partition walls and floor: The acoustically effective **Noise reduction and vibration damping:** The more Cello® HL FIRESTOP R heavy layer combines three lightweight the construction of a rail vehicle's floor, functions that are highly relevant for safety and comfort the more noise and vibrations can pass to its interior. in rail travel: fire control, noise control and vibration damping.

Fire control: The fire-retardant layer with its high and attenuation values provide highly effective noise content of mineral fireproofing agents helps stop control. flame propagation and limit fire damage.

Here the use of **Cello**® **HL FIRESTOP R** is the perfect solution because its excellent sound insulation

- Effective fire barrier
- Prevention of flame propagation
- Exceptional fire performance Fire containment solution
- Vibration damping
- Very good sound insulation effect at a weight
- of only 5 kg/m²
- Low thickness: 2,5 mm
- Recyclable
